

# The check before an agent's payment goes *out*.

Every agent stops at the same spot: money moving. Tiba reads the bill against your own record, pays only when they match, and refuses — with a receipt — when they don't.

THE PROBLEM

# Agents stop when *money moves.*

| Approve every payment yourself, and you're on call for your own agent.

| Or hand it a key and hope.

| A spending cap doesn't fix either one — it still can't tell a real bill from a fake one.

# You sign what it's *allowed* to do.

Write the job in plain English. Tiba drafts the scope, budget and expiry. You review it, then sign.

PERMISSION SLIPS

Give your agent a clear, signed boundary.

Describe the job in plain English. Tiba drafts the exact scope, budget, and expiry for you to review before you sign. Signed demo slips are kept in this browser; the existing wallet keeps its current limits.

01 · DRAFT

Test network

Describe the job

Plain-English instruction

Let my agent write a demo note and send 0.001 USDC to the Tiba demo payee on Solana devnet.

Expires in

24 hours

Draft permission

Tiba keeps the draft narrow. You confirm the exact terms before anything is signed.

SIGNED SLIPS

0

Your current boundaries

No signed permission slips yet. Create one only after you have reviewed its exact boundary.

02 · CHECKED BEFORE IT MOVES

If it doesn't match,  
*nothing moves.*

Tiba reads the bill and your own records. If the amount, the job or the payee don't match, it refuses.

RECEIPT — ANYONE WITH THIS LINK CAN READ IT

Refused

Amount asked for  
0.00 USDC

REFUSED — TIBA DECIDED NOT TO PAY

The two checks named different amounts.

Reason code QUORUM\_SPLIT:amount\_micros

To  
Solana Test  
ID sol-test-0911

Why  
The two checks named different amounts.

Left to spend today (live)  
999.95 USDC  
right now, not at the time of this receipt

03 · RECEIPTS

Every outcome gets a receipt *anyone* can open.

Paid or refused, the receipt says who asked, which rule allowed it, and what happened on Solana.

RECEIPT — ANYONE WITH THIS LINK CAN READ IT

Paid

Amount0.01USDC

Paid to

Solana Test

ID sol-test-0911

Why

Both checks agreed, the limits passed, and the test transfer completed.

Left to spend today (live)

999.95 USDC

right now, not at the time of this receipt

How this decision was made

| Step                             | Result      | Detail                                                                                                    |
|----------------------------------|-------------|-----------------------------------------------------------------------------------------------------------|
| Check 1 — read the delivery note | Same answer | Model used: deepseek-ai/DeepSeek-V4-Flash-0731<br>Reference (request ID): req-1789117785006248410-2870891 |

04 · YOUR LIMITS

You set the limits.  
The agent can only *read* them.

A ceiling per payment, hourly and daily limits, saved recipients only, and a freeze switch. Big payments still come back to you.

This is the shared demo wallet: read-only, test network only. [Create your own](#) or [sign in](#).

PROOF SO FAR

Correct bills get paid.  
Padded or fake ones *don't*.

20 / 20    10 / 10    0 / 20    13 s

CORRECT BILLS PAID    FAKE OR PADDED BILLS REFUSED    CORRECT BILLS WRONGLY REFUSED    PER DECISION

OUR OWN TEST, 29 AUG 2026, ON A PRACTICE PAYMENT RAIL. WE WROTE THE 30 BILLS OURSELVES. NOT LIVE FIGURES.

1st place · Superteam Malaysia Solana Lab · Aug 2026

Security audit: 6 of 6 issues fixed · 15 Sep 2026

Live on Solana's test network · agents can also pay for services over x402

18 rivals checked, 25 Sep 2026 · none refuses a wrong bill automatically (one mentions checking invoices, a person still approves) · 0 of 17 give a receipt for a refusal

MARKET

Agents will spend *trillions*.  
Every payment needs a yes or a no.

\$3–5T

of buying run by AI agents by  
2030

McKinsey, Oct 2025. US retail alone: up to \$1T.

\$303B

in stablecoins today, heading  
to about \$420B by year end

Stablecoin Beat, 10 Sep 2026. Year-end projection:  
Citi, via Spark.

\$30–50M

a year if 1% of agent spending  
runs through a check like Tiba  
at 0.1% per payment

Our what-if, maths shown. Not a forecast.

36 YC companies build agent-spending limits. 92 more sit next to them. None of the 18 we checked refuses a wrong bill automatically — that seat is still empty.

HOME RAIL: SOLANA · PROOF IT TRAVELS: TEMPO, ZCASH

# Built for one buyer first: *bounty and grant payouts.*

Communities and grant programs that pay contributors and bounties — starting with Superteam Malaysia and the KrackedDevs crowd. An agent pays a contributor; Tiba reads the claim against the bounty and the record, pays or refuses, leaves a receipt either way.

SOLANA · HOME RAIL

---

Where Tiba already runs, and where it won Superteam Malaysia's Solana Lab.

TEMPO · PROOF

---

Built by Stripe and Paradigm, fees paid in the stablecoin. Built and tested, not live — for contractors and suppliers too.

ZCASH · PROOF

---

Payments hidden by default, a viewing key for the auditor. Built and tested, not live — for private payroll and grants too.

HOW IT SCALES

# Same check, *any company* whose agents pay people.

TODAY

Builders on Solana, Tempo and Zcash. Test networks, free.

NEXT

Real money, after a second security audit.

THEN

Any company whose agents pay suppliers, freelancers or bounties.

Free to start. A small fee each time we check a payment — so it grows with payments, not with people.

FOR COLOSSEUM

# Live on the *test network*.

Next: three outside teams from the Superteam Malaysia and KrackedDevs crowd, running test payouts through Tiba — each with a public receipt, and a refusal.
